## A quantum leap in innovative design

MINISTAR®, the world's smallest halogen reflector lamp, brings unmatched freedom of expression to luminaire and furniture designers. To encourage luminaire manufacturers and design students to exploit this potential to the full, OSRAM launched a European MINISTAR® Contest. Numerous fixtures were submitted in the categories ceiling, pendant, wall, table, floor and furniture. A jury of six international lighting experts – Hannelore Kress Adams (Germany), Prof. Wojciech Zagan (Poland), Renato M. de Toffol (Switzerland), Wilfried Pohl, Christian Anselm (Austria) and Keven Verdun (UK) – assessed the design, technical and functional merits of the fixtures. This brochure presents not just the three winners but also the nominees and other fixtures of note. Each one of them illustrates the mega impact this mini lamp can have!

## Designs of brilliance

Three very different designs swept the field in the OEM Contest. The first prize went to a table luminaire the jury judged to be “the perfect solution for a MINISTAR® Axial Reflector” – small, compact and light with an excellent transformer and touch-dim function. The second prize, a pendant luminaire, was praised for its “material minimalism”, multifunctionality and glare-free illumination. The third prize, a wall luminaire, was described as a “phenomenal idea” for indirect illumination using a MINISTAR® lamp.

## Superior performance

MINISTAR® is not just the world's smallest halogen reflector lamp, it also offers a number of other technical features fixture manufacturers can profit from. MINISTAR® Axial Reflector bundles the light for an optimum spotlight effect while MINISTAR® Side Reflector delivers rectangular illumination. What's more, the integrated high-tech coating efficiently directs light and heat forwards. Advantages the manufacturers of these nominated fixtures used to the full.

## Innovative highlights

The first prize went to a German student. The flexibility, versatility and material minimalism of his design convinced the jury. Another German student took second prize with a highly original, “most intellectual” design praised as the “rebirth of the bulb”. The third prize went to a Swiss student whose floor luminaire was seen as the “best solution in purely design terms”. All three designs demonstrate the huge innovative potential of the world’s smallest halogen reflector lamp.

## Breaking new ground

MINISTAR® sets new standards in miniaturisation – and that opens up unheard-of design possibilities for all kinds of fixtures. Design students from eight European countries exploited these possibilities to the full in using the lamp as a design element of unparalleled flatness and flexibility – and also combined it with a wide variety of materials. Freed from any confines imposed by the market place, these students came up with designs of sparkling purity, surprising compactness and startling audacity.

## Exploiting the potential

It was not only the three OEM winners and 15 nominees who took advantage of the world's smallest halogen reflector lamp to come up with striking designs. So many other innovative ceiling, pendant, wall, table, floor and furniture fixtures were entered for the MINISTAR® Contest we simply had to present a selection of them here. Conventional, minimalist, functional or playful – these fixtures prove that anything is possible with a MINISTAR® lamp.

## Inspiring ideas

Student designs are naturally more daring than most commercially manufactured products – and the world’s smallest halogen reflector lamp certainly offers plenty of scope for creativity. Here we present a selection of the most interesting designs entered by other students. Inspiring ideas that illustrate the broad spectrum of fixture designs MINISTAR® makes possible.

# Spotlight on MINISTAR®

MINISTAR® adds a new dimension to luminaire design. The mega potential of its minimal size is evident in the many exciting designs entered for the European MINISTAR® Contest. For further information on how you can profit from the world's smallest halogen reflector lamp, visit [www.osram.com](http://www.osram.com) or contact your local OSRAM representative.
